

6/21 /2008

A small, but dedicated, work crew went to Mule Mtn this morning and reinstalled the Mule APRS digipeater. It was moved to the from the CARA building/EPG tower to the RACES/EMCOM building and the antenna is now on the smaller, co-located, County tower. This antenna position is actually higher above ground than the former location on the EPG tower. Hopefully it will provide better coverage toward Sulphur Springs Valley and Douglas without compromising the Sierra Vista / Benson coverage. So far the digi path to Lemmon and Pinal looks to be at least as good as before.

Thanks to Pablo (KE7FPP) & Roy (KE7LIZ) for the preliminary work done yesterday that made today's effort relatively painless.

Today's crew consisted of Larry (WA7GNV) our tower climber, supported by the ground crew consisting of Mike (AD7HZ), Lee (KD7OED), Rich (KD7RDG), Vince (AA7JB), and Bob (N7INK).
